a
Domain classifier
AUC = 1.000
True-positive rate
False-positive rate
b
Domain separation
(disease labels excluded from fit)
development
(n=297)
GSE140829
(n=587)
Sample-row count
Predicted external-domain probability
c
Replicate stability
10 x 5-fold CV
Domain AUC
permutation p = 0.00020
disease labels: row alignment / post hoc strata only
Repeated CV run
